Executive Summary

Rate held steady at 150, reflecting a 0.0% trend over the period. The mean rate across the 40 records remained 148.75, firmly confirming price consistency.

Total Hours	-25.0%	·	Total Billable Amount	-25.0%	·	Avg Rate	+0.0%
-------------	--------	---	-----------------------	--------	---	----------	-------

Hours dropped to 6 in the latest reading, a 25.0% decline from the mean. Concurrently, the latest billable amount fell to \$900, \$88.38 below the mean of \$988.38. The combination of reduced hours and unchanged rates compresses total billable revenue despite price stability. With billable amounts also decreasing, the organization risks a significantly shortfall relative to historical averages. Adjust staffing schedules to reallocate resources toward higher-utilization projects within the next two weeks, and implement a weekly monitoring dashboard to track hour trends and billable amounts.

Recommendations

1

Increase average Hours to at least 7 per period by scheduling additional tasks for under-utilized staff.

2

Optimize the Rate by raising it to \$155 for new contracts while maintaining competitiveness.

3

Implement a quarterly review of Billable Amounts to identify and close the \$88 gap between the latest value (\$900) and the mean (\$988).

4

Launch a targeted training program to improve efficiency, aiming to raise the minimum Hours from 4 to 5 across all projects.

5

Reduce variability in Billable Amounts by setting a floor of \$500 per invoice, aligning with the observed minimum.
